Resume

After working in industry from 1975 to 1983, Mr. Scripps formed his own company committed to helping organizations obtain and retain competitiveness by better applying continuous improvement strategies and tools. From 1983 to the present, his extensive experience consulting and training has covered product-focused applications from research and development through product and process development, product manufacturing, as well as transactional applications in service applications. Organizations for which I have consulted or trained include manufacturers (chemical, pharmaceutical, plastic, insulation, automotive parts, computer hardware, medical device, consumer product, earth-moving equipment) and service providers (research laboratory, utility, financial service, customer service.)

Significantly, in 2004 he developed from relevant experience the curriculum and materials for the American Society for Quality's Design for Six Sigma course that he presents numerous times per year.
